RACK
SERVER

| Colocation Rack | Server Rack | Open Rack | Wallmount Rack |

Rack Server features a massive front to rear ventilation capacity that meets or exceeds server manufacturer requirements. Its integrated baying tabs make it easy to combine multiple enclosures in rows for data center applications. This enclosure is also compatible with hot-aisle/cold-aisle configurations.

With its locking, reversible, removable front and rear doors, and locking, removable side panels, Rack Server provides ultimate equipment safety. The side panels are half size for ease of removal and reinstallation. The split rear door design allows the enclosure to be placed closer to a wall. Rack Server meets all requirements toward PCI DSS compliance.

All components of Rack Server are grounded to the enclosure frame. Front and rear threaded grounding points are provided for connection to the facility earth ground. The removable front and rear doors feature quick-release ground wires.

Colocation Rack

FEATURES

- Available size :

    - 45U splitted 3 section (15U per section)

    - 42U splitted 2 section (21U per section)

- Standard 19" mounting hole for server components

- Unique Key for each compartmen

- Powder coated (Black Sandy, Black Textured)

- Include closed cable tray for each colocation

- Include universal mounting for PDU

- Ingress Protection : IP 20

- Top & bottom cable Entry (c/w brush seal)

- Use caster 2 inch with nylon material for movement

- Use Levelling Feet
